Query by service type

Here you can make a list that shows the subscribable public communications services together with the main data of their providers.

You can narrow the scope of query:

- By the status of service:
    - Registered (under consideration, not functioning yet)
    - Active (functioning)
    - Under deletion (cessation has been reported)
    - Deleted from registry (officially cessated)
- By type of service:
    - For this query you can select from a multilevel list that contains specific service types and higher level groups. By choosing a group, all the services belonging to any of the service types of that group will be shown in the list.
- By a chosen date:
    - Here you can optionally choose a former date. Then all the services and their providers will be shown by their status of registration valid on that particular date.

If the query resulted many rows then you can shorten the list by giving more filter conditions or you can view the whole list by the „View all" button on the top.

The data of the listed services can be downloaded as an Excel file by clicking on the „Excel" button.
